Gomero Achieves ISO 27001 Certification for Commitment to Information Security

Gomero Group AB's wholly owned subsidiary Gomero Nordic AB has been certified according to ISO 27001:2013. The certification is part of Gomero's extensive work to ensure very high standards of information security and protection against cyber breaches for its customers in the energy sector.

Digitized maintenance processes create enormous benefits for companies in the energy sector. However, this work puts demands on maintaining a robust information security management system which safeguards business data. The handling of information securely has been a key priority for Gomero since the company first started offering connected devices and services and preparations for the ISO 27001 certification have intensified over the past year. Great importance has been placed on highlighting and implementing the company's processes regarding information security in the existing management system. Gomero has been certified according to ISO 9001 and ISO 14001 for over ten years and has considerable experience in running a process-controlled business.

“The energy sector has a strong focus on developing smart distribution systems with innovative solutions. Gomero's connected system for monitoring and analysis plays an important role in this context. The certification is therefore an important landmark for us enabling more commercial deliveries, while also providing proof that Gomero lives up to the market's high demands for information security and classification in a connected environment. This is especially important in an industry where cyber attacks are becoming increasingly prevalent”, said Jan-Eric Nilsson, CEO at Gomero.

“My view is that the implementation of ISO 27001:2013 has been professionally rolled out and follows best practice. It is clear that the organization's style of working is reflected in the management system, and Gomero has a compelling approach to security with ISO ambassadors and ISO councils. Overall, this is a very well executed ISO 27001 system. It is also very unusual for a new certification to be approved without alterations”, comments Berndt Roslund, Senior Lead Auditor at Intertek.

“Electricity networks and infrastructure are receiving huge modernization investments and Gomero is an enabler in the movement towards smarter electricity grids. Our systems and services play a significant role in contributing to customers being able to initiate the digitization of maintenance work on switchgear and substations. With the latest certification, we have yet another validation that Gomero meets customers' high demands for information security and well-structured processes”, stated Malin Giselsson, CTO at Gomero.

About Gomero

Gomero Group AB (publ) is a company that helps customers in the energy sector to achieve long-term sustainable economic growth through the development of systems and services for predictive maintenance - an area with very strong global growth. With connected products, sensors, AI and data analysis, we ensure that maintenance work can be carried out optimally and with a high degree of automation. For customers, this means increased reliability, reduced costs and more opportunities to work with predictive maintenance. Gomero's customers include Ellevio, Vattenfall, Skagerak Energi, Fingrid and Deutsche Bahn.

Gomero Group AB (publ) – based in Gothenburg, Sweden, consists of two wholly owned subsidiaries, Gomero Nordic AB and Gomero Australia Pty. Ltd.

About Intertek

For more than 130 years, companies around the world have depended on Intertek to help ensure the quality and safety of their products, processes, and systems.

We go beyond testing, inspecting and certifying products; we are a Total Quality Assurance provider to industries worldwide. Through our global network of state-of-the-art facilities and industry-leading technical expertise we provide innovative and bespoke Assurance, Testing, Inspection and Certification services to customers. We provide a systemic approach to supporting our customers' Quality Assurance efforts in each of the areas of their operations including R&D, raw materials sourcing, components suppliers, manufacturing, transportation, distribution and retail channels, and consumer management.
